## Claim Rejections - 35 USC § 112

1. Claims 17 and 21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 17 and 21, the phrase "a minimum reflectivity which is 0.5% or lower" rendering the claims indefinite, because the relationship between minimum and lower is unclear. Clarification is required.

## Claim Rejections - 35 USC § 102

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1-6, 12-16 are rejected under 35 U.S.C. 102(e) as being anticipated by Anderson et al (US 5714268).

It is noted by the Examiner that some claims invovive processing steps.

Applicant is reminded that it is the product itself which must be new and unobvious. In re Pinkington 162 USPQ 145, 147 (CCPA 1969). Unless some unexpected result is shown that occurs due to Applicant's specific process, different processing steps are not patentability distinguishing for claims to an article.

Anderson discloses a thin film substrate comprised of a glass substrate and metallic coatings. The metallic coatings are coated over onto the glass substrate for optimal light transmission and light reflection.

Art Unit: 1775

Tantalum is first coated onto the glass substrate, followed by a second metallic coating which can be  $Fe_2O_3$  and CoO coating (col 4 L 8-16). The second metallic coating can also be a tin material (col 5 L 55-62). Anderson has no mentioned of including chromium in the metallic coatings, thus Anderson's teaching anticipates the present invention.

Absent evidence to the contrary the properties the compositionally similar structures would inherently be the same as those claimed in the present applicant meeting the limitations of claims 17 and 21.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cathy Lam whose telephone number is (571) 272-1538. The examiner can normally be reached on 9am-6pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Deborah Jones can be reached on (571) 272-1535. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
